

# AVENIO ctDNA and Tumor Tissue Expanded Panel V2

*This 77-gene research panel, included in the AVENIO ctDNA Expanded Kit V2 and the AVENIO Tumor Tissue Expanded Kit V2, contains biomarkers associated with various cancer types from 17 genes in the U.S. National Comprehensive Cancer (NCCN) Guidelines\*, plus 60 additional biomarkers relevant in clinical research.*

\*\* Certain variants are associated with sensitivity to irinotecan.

\* Indels are limited to variants in a pre-specified list of positions, referred to as "Loci of Interest", except for EGFR exon 19 long deletions, EGFR exon 20 long insertions and MET long insertions, which are not restricted to a pre-defined set of Indels.

§ Detection of Fusions and CNVs are limited to variants in a pre-specified list of positions, referred to as "Loci of Interest" in the AVENIO analysis software.

§§ Indel for TP53 is called for tissue only, not plasma.

Associations of variations or mutations in these genes with the listed diseases were sourced from the following: COSMIC, GeneCards, My Cancer Genome.
